QuarkXPress Server 2025 (22.1.2) — System Requirements (Release Delta)

Quark Publishing Platform · QXP Server · changes vs the published baseline

---

This note lists the installation / system-requirements changes introduced by this release, relative to the current published Quark System Requirements document (the baseline, on quark.com/documentation). Everything not listed is unchanged. Baseline verified 15 Sep 2026.

Baseline: Getting Started with QuarkXPress Server 2025 — System Requirements

Changes in 22.1.2

No system-requirements changes in this release. The published document needs no edit for 22.1.2.

Certified platforms

Windows Server 2022. Already listed in the QuarkXPress Server 2025 published System Requirements. **QXPS 22.1.1 (build 60509)** was formally certified on Windows Server 2022 via full render-catalogue functional testing (**837/837 passed**, no OS-attributable failures) — confirming the existing supported-OS row with QA evidence; 22.1.2 inherits this. (Windows Server 2025 is the intended default / recommended deploy target going forward.)

Base document (quark.com/documentation)

- Getting Started with QuarkXPress Server 2025 — System Requirements

Delta confirmed in the 22.1.2 release tracker against the published baseline; the published System Requirements document remains the authoritative reference for the full requirements.
